## **Chapter 26 fluid and electrolyte balance Study guide**

Fluid and electrolyte balance is a dynamic process that is crucial for life and homeostasis. Fluid occupies almost 60% of the weight of an adult. Body fluid is located in two fluid compartments: the intracellular space and the extracellular space .

Measurements of serum electrolytes help us to decide which type of fluid should be administered in a dehydrated and clinically symptomatic patient (Refer Table 61-2 p.780). Sodium ion is the major player in maintaining the dynamic equilibrium and helps to determine the type of body fluid status .
