25 Chapter 2 Functions of a Complex Variable Basic concepts Let S denote a nonempty set of points in the complex z -plane. If there exists a rule f which assigns to each value $z = x + iy$ belonging to S , one and only one complex number $w = u + iv$, then this correspondence is called a function or mapping of the point z to the point w and it is denoted using the notation $w = f(z) = u + iv$.

Chapter 2 Functions of a Complex Variable

Equations 2.1 Complex functions In one-variable calculus, we study functions $f(x)$ of a real variable x . Like-wise, in complex analysis, we study functions $f(z)$ of a complex variable $z \in \mathbb{C}$ (or in some region of \mathbb{C}). Here we expect that $f(z)$ will in general take values in \mathbb{C} as well. However, it will turn out that some functions are

Complex Numbers and the Complex Exponential 1. Complex numbers The equation $x^2 + 1 = 0$ has no solutions, because for any real number x the square x^2 is nonnegative, and so $x^2 + 1$ can never be less than 1. In spite of this it turns out to be very useful to assume that there is a number i for which one has
